ABOUT ME

I am a recent graduate of Addis Ababa University, with practical experience in backend development using .NET Core (C#) and Node.js. I have built real-world applications and APIs, worked with relational databases like PostgreSQL, and integrated them with frontend interfaces using React.

I'm highly adaptable, able to learn any new technology quickly, and passionate about going deeper into backend architecture, clean code, and system optimization. I have a solid understanding of full-stack development and enjoy building both backend services and interactive user interfaces with React.

I take ownership of what I build, write readable and maintainable code, and always seek feedback to improve. I believe in continuous learning, staying updated with emerging trends, and contributing to solutions that make a real impact.

I'm a team player, comfortable working in agile environments, and always excited to collaborate, troubleshoot, and grow alongside other developers. My goal is to become a backend engineer who not only builds software but understands how to design efficient, scalable, and secure systems from the ground up.

EDUCATION AND TRAINING

- **Frontend Development:** React, JavaScript, HTML, CSS
- **Backend Development:** .NET Core (C#), Node.js, Express.js, Python, PostgreSQL, C++, Networking Fundamentals

HOBBIES AND INTERESTS

I enjoy creating interactive digital experiences, whether it's developing dynamic websites, designing simple games, or building engaging web and mobile applications. These projects allow me to express both creativity and technical skill in meaningful ways. I'm especially passionate about bringing ideas to life through clean design, smooth user interactions, and well-structured code.

PROJECTS

I have worked on a variety of projects that demonstrate my skills in both web and application development using technologies like .NET Core, Node.js, React, Python, JavaScript, HTML, and CSS.

My projects include job platforms, e-commerce systems, and interactive portfolio websites — all focused on solving real-world problems through clean and functional design. I consistently push myself to improve with each project and explore new tools and techniques as I go.
